Featuring All-New Devilish Training Exercises!

Human intelligence can be thought of as being divided into crystallized intelligence, which is fostered through education and experience, and fluid intelligence, which is used to respond to new situations and challenges. When we talk about someone being smart or not, we’re generally talking about fluid intelligence. It’s my belief that by engaging in training designed to strengthen working memory, fluid intelligence may be improved. The Devilish Training exercises included in this software are designed to allow you to continually train your working memory in an efficient manner. I hope you’ll take a little time out of each day to keep up with your training.

**WARNING - 3D FEATURE ONLY FOR CHILDREN 7 AND OVER**

Viewing 3D images by children 6 and under may cause vision damage. Use the Parental Control feature to restrict the display of 3D images for children 6 and under. See the Parental Controls section in the Nintendo 3DS Operations Manual for more information.

**WARNING - SEIZURES**

- Some people (about 1 in 4000) may have seizures or blackouts triggered by light flashes or patterns, and this may occur while they are watching TV or playing video games, even if they have never had a seizure before.

- Anyone who has had a seizure, loss of awareness, or other symptom linked to an epileptic condition should consult a doctor before playing a video game. Parents should watch their children play video games. Stop playing and consult a doctor if you or your child has any of the following symptoms:
  - Convulsions
  - Altered vision
  - Eye muscle twitching
  - Involuntary movements
  - Loss of awareness
  - Disorientation

To reduce the likelihood of a seizure when playing video games:

1. Sit or stand as far from the screen as possible.
2. Play video games on the smallest available television screen.
3. Do not play if you are tired or need sleep.
4. Play in a well-lit room.
5. Take a 10 to 15 minute break every hour.

**WARNING - EYESTRAIN AND MOTION SICKNESS**

Playing video games can result in eyestrain after a sustained period of time, and perhaps sooner if using the 3D feature. Playing video games can also result in motion sickness in some players. Follow these instructions to help avoid eyestrain, dizziness, or nausea:

- Avoid excessive play. It is recommended that parents monitor their children for appropriate play.
- Take a 10 to 15 minute break every hour, or every half hour when using the 3D feature, even if you don’t think you need it. Each person is different, so take more frequent and longer breaks if you feel discomfort.
- If your eyes become tired or sore while playing, or if you feel dizzy or nauseated, stop and rest for several hours before playing again.
- If you continue to have any of the above symptoms, stop playing and see a doctor.
